Hotel Riva Marina,  
Carovigno (BR), Italy

May 1<sup>st</sup> – 3<sup>rd</sup> 2014

Dear Colleagues,  
We are very pleased to announce the 7th International Immunonutrition Workshop to be held in Carovigno (Italy) May 1st-3rd 2014.

With this event, we intend to continue the successful tradition of the Immunonutrition Workshops which until now have greatly contributed to disseminate worldwide this new discipline. In fact, coupling basic principles of Nutritional Sciences to cellular and molecular immune mechanisms which regulate food intake, Immunonutrition has been established and consolidated with the time.

We feel that the announced workshop may lead to a better assessment of a safe as well as healthy dietary regimen for the prevention of food-related diseases. Therefore, "Eating for Preventing" would represent in future a major strategy to be pursued in terms of health system policy. All of you are cordially invited to participate to the 7th Immunonutrition Workshop with your scientific contributions and/or sponsorships.

Workshop

# Eating for Preventing

## TOPICS

- Obesity: prevention and treatment
- Age-related diseases
- Conventional and emerging bioactive compounds
- Processing of new molecules
- Ingredients of the Mediterranean diet
- Physical Activity
- Food Allergy
- Environmental changes and nutrition
- Assessing of immune functions in animal models and humans
- Special biomarkers
- Enteral and parenteral immunonutrition
- Epidemiology of Immunonutrition
